DETAILED ACTION

Drawings

1. The drawing filed 23 March 2005 are acceptable for examination.

Specification

2. The abstract of the disclosure is objected to because undue length. The abstract should contain no more than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 – 18 are rejected under 35 U.S.C. 102(***) as being anticipated by Liebchen (US Pat. No. 6,738,859).

Liebchen has a method of aerial image simulation for correcting optical proximity correction for a lithographic apparatus. An illuminator profile which corresponds to an intensity distribution is determined; parameters of the lithographic exposure apparatus are determined; from these a bilinear kernel is found – col. 7, lines 27, 28; a mask function; determining a vector; mapping and using a grid – col. 7, lines 68 – 67, col. 12, lines 60-67; uses in – focus and defocus conditions – col. 4, lines 49 – 67 and col. 19;

Art Unit: 2851

modifies the Hopkin model to include diffusion effects of the resist – col. 20; using aberrations; eigenfunctions and convolutions – see col. 3, lines 9 – 64; scalar source intensity distribution – see Table 1 for other scalar terms.

Claim Rejections - 35 USC § 103

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 19 – 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Liebchen (US Pat. No. 6,738,859).

The reference does not disclose a program, however, in view of math operations required one of ordinary skill in the art would use a computer program or algorithm to determine the kernel, the functions, convolutions, etc.
